STANDARDS

Our company supports QuarkXpress, Microsoft® Publisher, Adobe InDesign, and Microsoft Office (Word). We also support the PDF (.pdf) and PostScript (.ps) format

All files must be provided using special utilities within the applications for preparation for a printer:

InDesign	“Package Publication”
Quark Xpress.....	“Collect for Output”
Publisher.....	“Pack and Go”

or as PostScript (.ps) or PDF (.pdf) files created using Adobe Distiller®.

All graphic files must be provided as TIFF or EPS files. Other file formats will require conversion at an additional charge.

Full-color images and photos to be printed in 4-color process must be prepared in CMYK (NOT RGB). Spot colors should be identified as Pantone® colors.

A hard copy of the document is required so we will know what your document should look like. Multicolor documents should be submitted as separations.

Microsoft Office software **cannot** be color separated within the application. If the documents are to be printed on a printing press, we must use special procedures and tools to separate these files; this will require an additional charge. We will attempt to match the colors as closely as possible.

Some files may require special prepress preparation so they can print properly; this may require an additional charge.

Our staff is available to assist you in preparing your files properly so we can meet your time, quality, and budget needs.
